

Sunday 4:40 AM

Can and video generating models create a edit for me 🦴 , i have the video and I have the selected audio as well , just need some edits and fast movements at the best drop 🦴

LMAO 🦴 **yes, absolutely.** If you already have:

- 🎥 the raw video
- 🎵 the exact audio/song
- 🎯 the specific drop where you want the edit to go crazy

then AI-assisted video editing can get you **very close to the edit you're imagining**—cuts synced to the beat, speed ramps, zooms, transitions, motion effects, etc.

The important distinction is that **video-generating models** aren't necessarily the best tool for this. For your case, an **AI video editor** that works with your *existing* footage is much better than asking a model to regenerate the whole video.

For your exact situation

You can basically give me:

1. **Video** → upload it here
2. **Audio** → upload it here
3. **Tell me:**

“At 0:17.4 the beat drops. I want rapid cuts + speed ramps + zooms here.”

And I can help you design the edit **beat-by-beat**, including something like:

normal footage → buildup → slight slow-mo → beat → 3 rapid cuts → zoom → speed ramp → impact frame → fast movement → normal speed

If you upload the **video + audio**, I can inspect what you've got and help map out exactly what should happen at the drop. 🦴🔥
